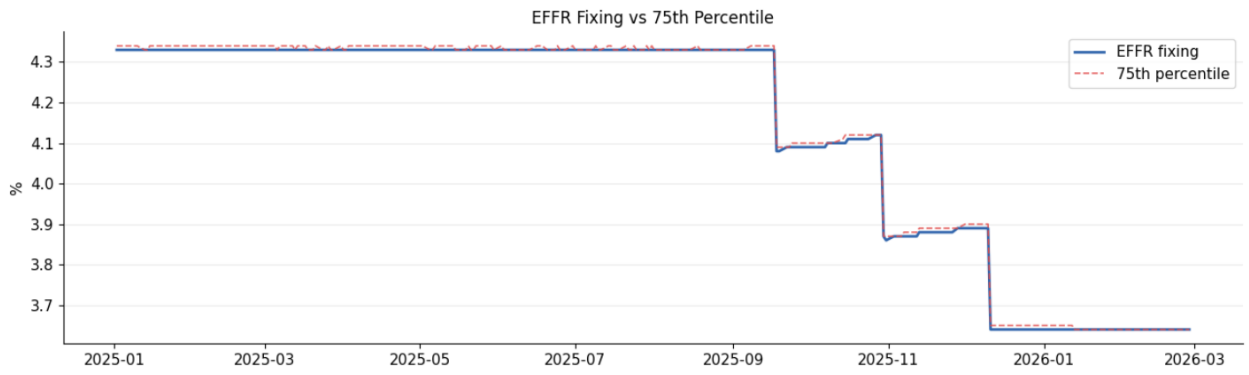
EFFR Fixing and 75th Percentile Correlation

The data is from 1st Jan2025 till 28th Feb 2026



There were total of 54 changes in 75th percentile of EFFR. There was 26 downward change and 28 upward changes.

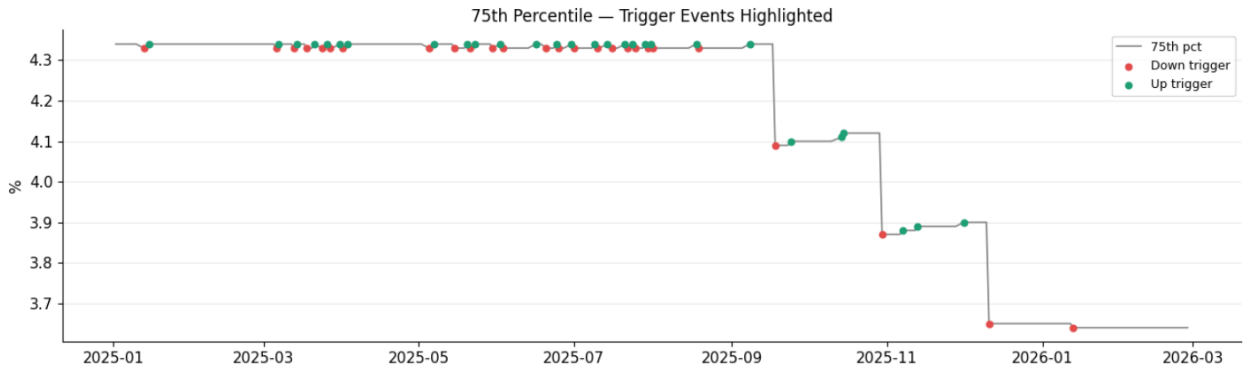
2025-12-11	3.90	3.65	-25.0	Down	3.64
2026-01-13	3.65	3.64	-1.0	Down	3.64



After analyzing this data, it was found that in the early part of 2025 the 75th percentile didn't have any effect on EFFR fixing, even if it came higher for few days, it would revert and vice versa. But after the cut cycle that began in Sep2025, a correlation can be observed. After the cut on 18th September the EFFR was 4.08 and 75th percentile was 4.09. Now we will analyze how it changed after that.

Date when 75th Percentile changed	Date when EFFR changed	EFFR	75th Percentile	Lag (number of days)
24/09/2025	08/10/2025	4.09	4.10	14
14/10/2025	16/10/2025	4.1	4.11	2
15/10/2025	27/10/2025	4.11	4.12	12
07/11/2025	13/11/2025	3.87	3.88	6
13/11/2025	28/11/2025	3.88	3.89	15
01/12/2025		3.89	3.9	Dec rate cut happened
13/01/2026		3.64	3.65 to 3.64	75th Percentile shifted from 3.65 to 3.64 (EFFR level)

From this analysis a small correlation can be seen. If 75th percentile increases and remains elevated for 10-15 days then the rate is likely to change, another option could be that the 75th percentile increased by one more then EFFR changes that day only.
